AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph starting on page 6, line 35 of the application as filed with the following amended paragraph:

-- The second recessed circular region is located approximately at the equatorial region 19 of the hemispherical cavity 16 and consequently has a much wider width or diameter than the circular region 17. As illustrated, the housing 13 comprises an inclined tapering interior wall portion 13a and a generally vertical inner wall portion 13b, which together at least partially define the cavity 16 in which the spherical ball bearing 12 is located. --
